Analyses executed	CANX, MWA	Reported	Feb 09, 2023

Laboratory note: The estimated concentration of the unknown peak in the sample is 131% | Currently PharmLabs laboratory can not confirm an unidentified peak in your chromatogram due to interference (only with highly concentrated D8 products) from which we believe to be either (+)-THC or D9-THC. At this time there are no reference standards available for (+)-THC. (+)-THC is a different compound from the main (-)-THC cannabinoid and, therefore, these two compounds may have different effects. Using the most advanced instruments and techniques available, the separation of (+)-THC and D9-THC is problematic for the scientific community as a whole. PharmLabs believes the unidentified peak to be a combination of (+)-THC and D9-THC with the majority, if not 98, of the concentration being (+)-THC. Total (+/-) D8 Concentration is estimated to be: 20.84%
